SUPPLEMENTARY FIGURE LEGEND

Figure S1. Frequency of rare T cell subsets in TK007 patients. (A) Frequency of γδ T cells among peripheral blood circulating CD3 T cells in three healthy controls and in four representative TK007 patients, studied longitudinally at different time-points during their follow-up. Shown is average with Standard Error Mean (SEM). (B) Frequency of nTregs (CD25+CD127dimFoxP3+) among peripheral blood circulating CD4 T cells in three healthy controls and in four representative TK007 patients, studied longitudinally at different time-points during their follow-up. Shown is average with Standard Error Mean (SEM).
