Breast implant–associated anaplastic large-cell lymphoma. Pleomorphic lymphoid cells with basophilic cytoplasm were strongly CD30+ but negative for ALK protein. The cells had a cytotoxic T-cell phenotype. A few reactive lymphocytes and histiocytes are present in the background. See the article by Swerdlow et al on page 2375.

EDITORIAL

2361 Introduction to a review series: the 2016 revision of the WHO classification of tumors of hematopoietic and lymphoid tissues
Mario Cazzola
