

COVER FIGURE

Three-dimensional confocal z-projection of the dermal layer of skin from an embryonic day 14.5 *Nfe2l3*^{-/-} mouse embryo. *Nfe2l3*^{-/-} mice have severe in utero thrombocytopenia. A component of the prenatal *Nfe2l3*^{-/-} phenotype is the leakage of erythrocytes (TER119; gray) from the peripheral circulation (PECAM1; red) into the lymphatic vessels (LYVE1, green). See the article by Farley et al on page 885.
