

More than just palatable...

this protein therapy is virtually *tasteless*

When 100 or more grams of protein per day must be administered to a critically ill or convalescent patient, taste and bulk are real problems.

Essenammine is an essentially tasteless protein concentrate. In virtually pure form, adaptable to any type of diet, Essenammine supplies large quantities of the needed amino acids. May be administered in milk, broths, fruit and vegetable juices, meat loaf, baked goods, custards, ice cream, etc.

The required amount of Essenammine should be mixed with a small amount of cold water to form a smooth paste; then add liquid or other ingredients gradually.

ESSENAMINE[®]

- ... high concentration of protein
- ... minimum bulk
- ... tasteless ... bland ... unflavored

Supplied in 7½ and 14 oz. jars.
